

# Embossing equipment

A high performance embossing station can be installed in a suitable position in the production line so that the lower surface of the membrane can be embossed with the appropriate design of embossing on our embossing roller.

This equipment produces a beautiful personalized surface and reduces the production costs.

## Main features:

- Embossing design based on client requirement
- Better embossing efficiency in global market
- Torque control to avoid tension
- Best performances and characteristics using the same compound
